Document Type: ED Provider Note

Patient Name: Alice Williams
MRN: 28374910

DOB: 1968-04-15
Date of Service: 2026-08-08

CHIEF COMPLAINT: Chest pain.

HISTORY OF PRESENT ILLNESS:

55-year-old female presenting with atypical, sharp chest pain that started 2 hours ago. No radiation, no shortness of breath, no diaphoresis. Pain is reproducible on palpation.

PHYSICAL EXAM:

Vitals: BP 130/80, HR 80, RR 18, O2 Sat 98% on room air.

Resp: Clear to auscultation bilaterally.

CV: Regular rate and rhythm, normal S1/S2, no murmurs.

Chest wall: Tender to palpation over the left costochondral junction.

LABORATORY & IMAGING:

Troponin: < 0.01 ng/mL (Normal)

EKG: Normal sinus rhythm, no acute ST-T wave changes.

BNP: 150 pg/mL (Normal)

ASSESSMENT & PLAN:

Atypical chest pain, likely musculoskeletal (costochondritis).

Low suspicion for acute coronary syndrome, but due to patient anxiety and age, will place in observation status for serial cardiac enzymes.

- Repeat Troponin and EKG in 4 hours.
- Place in Observation Status.
